

OPERATION INSTRUCTIONS

Marmorix[®] The **flexible** floor tile for both indoor and outdoor use.

OPERATION/LAYING INSTRUCTIONS FOR MARMORIX[®] FLOOR TILES

Thank you for choosing Marmorix[®] floor tiles.

Marmorix[®] floor tiles are manufactured from a mixture of first-class PU (Polyurethane)-resin of a German brand manufacturer and non-artificial marble gravel. You purchased a floor tile that is flexible, UV-constant, weather-resistant and odorless. Everybody can lay those plates for perfect flooring, without any expert knowledge, both in the indoor and outdoor area.

In order to enjoy your flooring permanently, we ask you to consider the following:

PREPARATION OF THE SUBSOIL:

- ◆ Laying has to be done on a planar, sustainable and on a subsoil free of settling.

Outdoor area

- ◆ The subsoil should have a decline of at least 2% away from the building.
- ◆ If necessary, in the outdoor area, a sealing should be affixed previously, ideally with Polysin-D (1K polyurethane liquid plastic). Polysin-D results in a seamless layer. Therefore overlapping is omitted.
- ◆ For concrete, mineral surfaces and bitumen please use a universal primer and for tiles the Primer-T.
- ◆ Unevenness is to be adjusted with suitable material.

LAYING OF PLATES:

- ◆ Remove release film on the back of the plates completely.
- ◆ Starting with the leading edge, apply the plates flushed.
- ◆ Apply following elements firmly. **Fix the plates to the subsoil by gluing pointwise with our PU-glue (minimum 5 points per plate).**
- ◆ Edge panels are also glued pointwise.
- ◆ Parting of plates can be done on a sharp angle (breaking). Later, when filling, the stones will fit in and become a homogeneous surface.
- ◆ Indoors, the panels are cut to fit. (Gluing of the plates in the interior is not necessary).
- ◆ End pieces as well as base elements can be cut with an angle grinder or a wet cutter with diamond blade.
- ◆ The Marmorix[®] floor tiles are made of natural stone. Color variance can not be excluded. That is not a reason for complaint. When laying please take the plates out of multiple packages at the same time and process.

CLEANING:

- ◆ For an ordinary cleaning you will need no special method. Also in case of small impurity, there can be worked with a wet scrubber and a neutral purifier.
- ◆ The absorption of dirt kept in the plates can be easily done with a vacuum cleaner.
- ◆ A basis cleansing can be done once or twice a year, depending on your demands. We recommend the use of a high-pressure-cleaner, but also so-called sprinkle-extracting-cleaners have approved.

Outdoor area

- ◆ The same applies as for the interior area. Additionally a high pressure cleaner can be used.
